

# SuperJANET-5 & UKLight

ONT Workshop – Tokyo

**Peter Clarke**  
[Peter.clarke@ed.ac.uk](mailto:Peter.clarke@ed.ac.uk)

**7&8<sup>st</sup> Sept 2006**

- 1. UKLight & SuperJANET-5**
- 2. Research projects on UKLight**
- 3. The Questions**

- A national NREN production Network called SuperJANET4 – run by UKERNA

- UKlight was conceived on 2001  
and finally built ~ 2003**

**As of 2006 UKLight will be  
integrated into the new  
SuperJANET-5 infrastructure**

# The JANET Backbone

The map illustrates the JANET Backbone network across the United Kingdom. Major hubs are represented by large blue circles, while regional entry points are shown as smaller blue circles. The network is interconnected by a series of links, with a dense core in the south-east of England.

**Key**

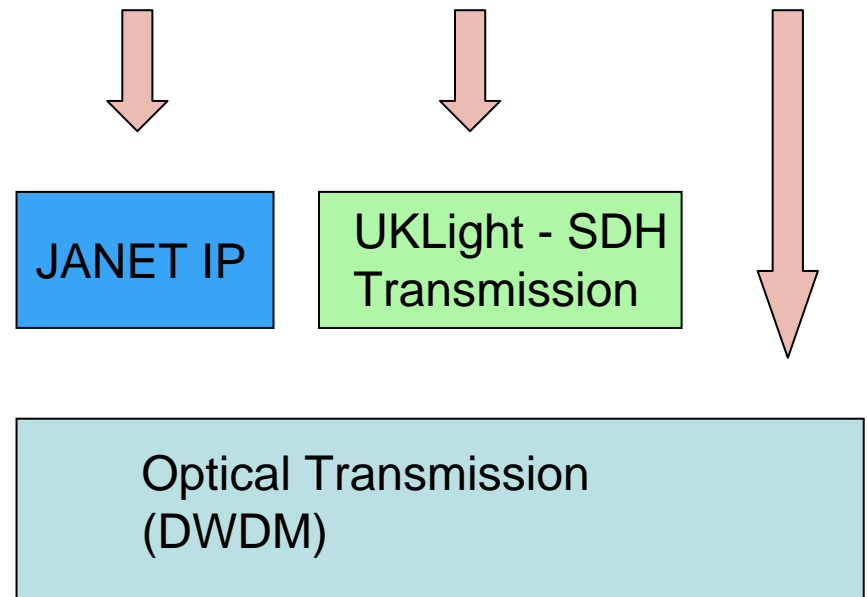

|             |  |
|-------------|--|
| AbMAN       | Abertown MAN   |
| C&NL MAN    | Cumbria and North Lancashire Area Network                            |
| Clydenet    | Clyde Area Network   |
| EdStMAN     | Edinburgh and Stirling MAN   |
| EastNet     | East of England Regional Network                                     |
| EMMAN       | East Midlands MAN  |
| FaTMAN      | Fife and Tayside MAN   |
| LeNSE       | Leamington Network South East  |
| LMN         | London Metropolitan Network  |
| MAN         | Metropolitan Area Network  |
| MidMAN      | Midlands MAN   |
| NNW         | Net North West   |
| NorMAN      | North East MAN   |
| SWERN       | South West England Regional Network                                  |
| TVN         | Thames Valley Network  |
| UHM Network | University of the Highlands and Islands Millennium Institute Network |
| YHMAN       | Yorkshire and Humberside MAN   |

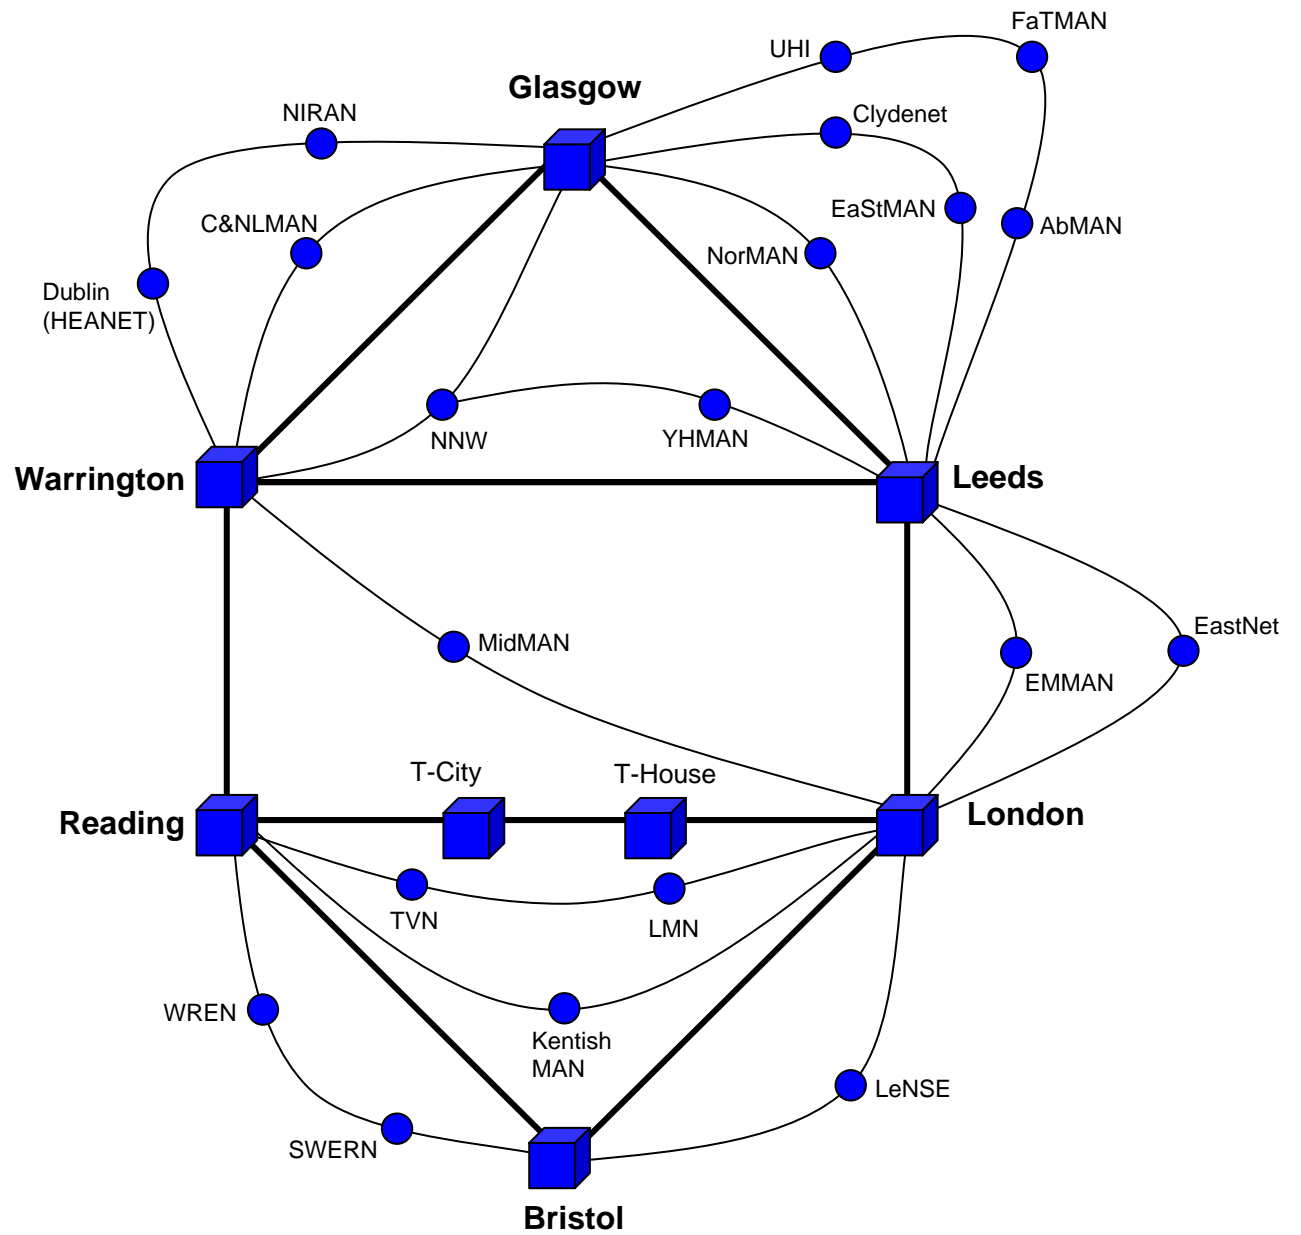

**Legend:**

- Core Point of Presence
- Regional network entry point
- Backbone link
- Access link

# SuperJANET5 Network Services

- JANET IP service
  - High capacity
  - Resilient engineering
  - Dual connection to each Regional Network
- Point to point circuits (wavelengths / lightpaths / lambdas...)
  - UKLight style
    - 50Mb/s – 2.5Gb/s
  - Optical layer
    - 1GE, 2.5 Gb/s, 10Gb/s

# SuperJANET5

## Optical Transmission Equipment

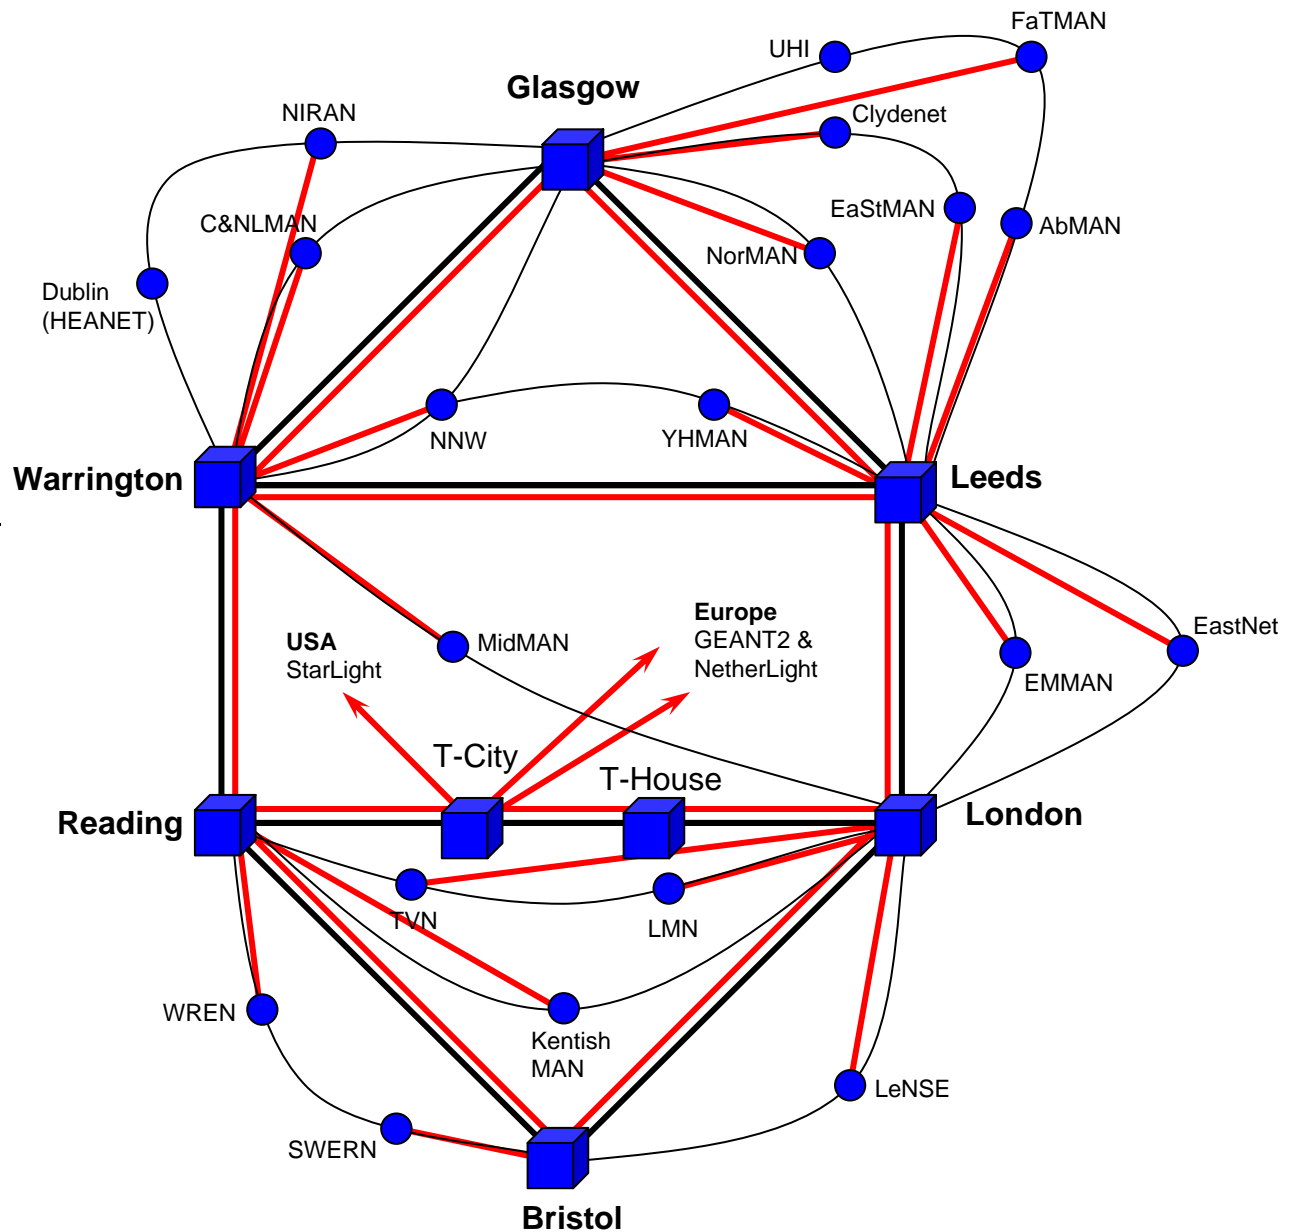

- Optical Transmission layer
- DWDM (Multiple wavelength) equipment
  - Ciena CoreStream
    - Up to 96 waves per fibre
  - Ciena 4200
    - Up to 32 waves per fibre

# Research Capacity

- 10 Gb/s for each Regional Network in first instance
- Delivered to **ONE** of the Regional Network Entry Points (RNEPs)
- UKLight network will be migrated to SuperJANET5 using this capacity

SuperJANET5  
Research capacity  
Integrating UKLight  
with SuperJANET5  
Initially a 10 Gbit/s  
circuit available to every  
RN.  
More capacity will be  
added according to  
demand.

## Snapshot of UKLight Connectivity for 8 March 06...

| Task     | UKLight Link                | Bandwidth    | Status            |
|----------|-----------------------------|--------------|-------------------|
| CDF      | UCL - Chicago (FNAL)        | 1*1.0 Gbit/s | Active            |
| VLBI     | Man - Amsterdam (Dwingeloo) | 1*1.0 Gbit/s | Active            |
|          | Man - Amsterdam (JIVE)      | 1*600 Mbit/s | Required Mar 06   |
|          | Man - Chicago (Haystack)    | 1*650 Mbit/s | Active            |
| ATLAS    | RAL - CERN*                 | 4*1.0 Gbit/s | Active            |
|          | RAL - Lanc                  | 1*1.0Gbit/s  | Active            |
|          | Lanc - Man                  | 1*1.0Gbit/s  | To be connected   |
|          | Lanc - Edinburgh            | 1*1.0Gbit/s  | Required May 06   |
| HPC      | UCL - Chicago               | 1*300 Mbit/s | Active            |
|          | Man - Chicago               | 1*300 Mbit/s | Active            |
|          | UCL - Man                   | 1*300 Mbit/s | Active            |
|          | DL - Chicago                | 1*100 Mbit/s | To be reconnected |
|          | DL - UCL                    | 1*300 Mbit/s | To be reconnected |
|          | DL - MAN                    | 1*300 Mbit/s | To be connected   |
| e-Health | RAL-DL                      | 1*750 Mbit/s | Active            |

\* UK-HEP connection

# SuperJANET5 summary

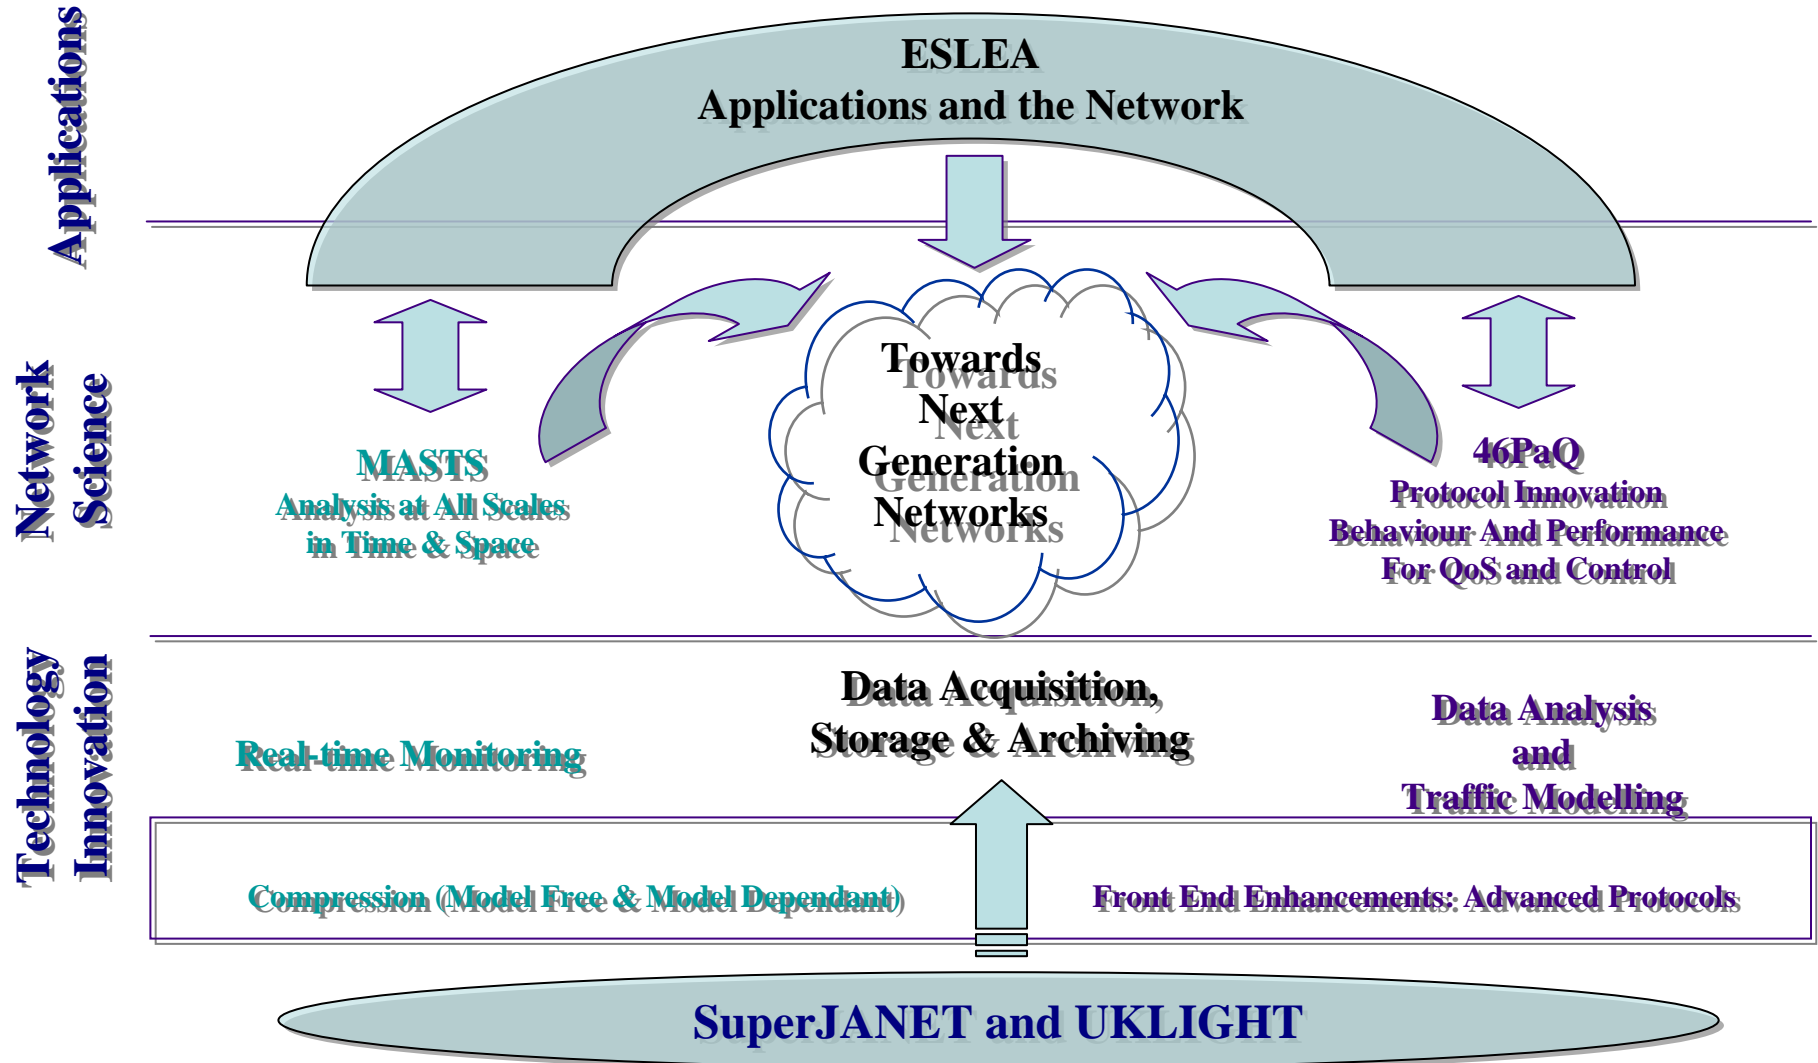

- Telco grade transmission infrastructure dedicated to JANET
- Suppliers: Verizon Business (was MCI) & Ciena
- Fibre everywhere
  - 5500km
- Designed for resilience
  - Dual entry points to RNs
  - All RN requirements met
- Ability to add additional bandwidth at marginal costs

**1. UKLight**

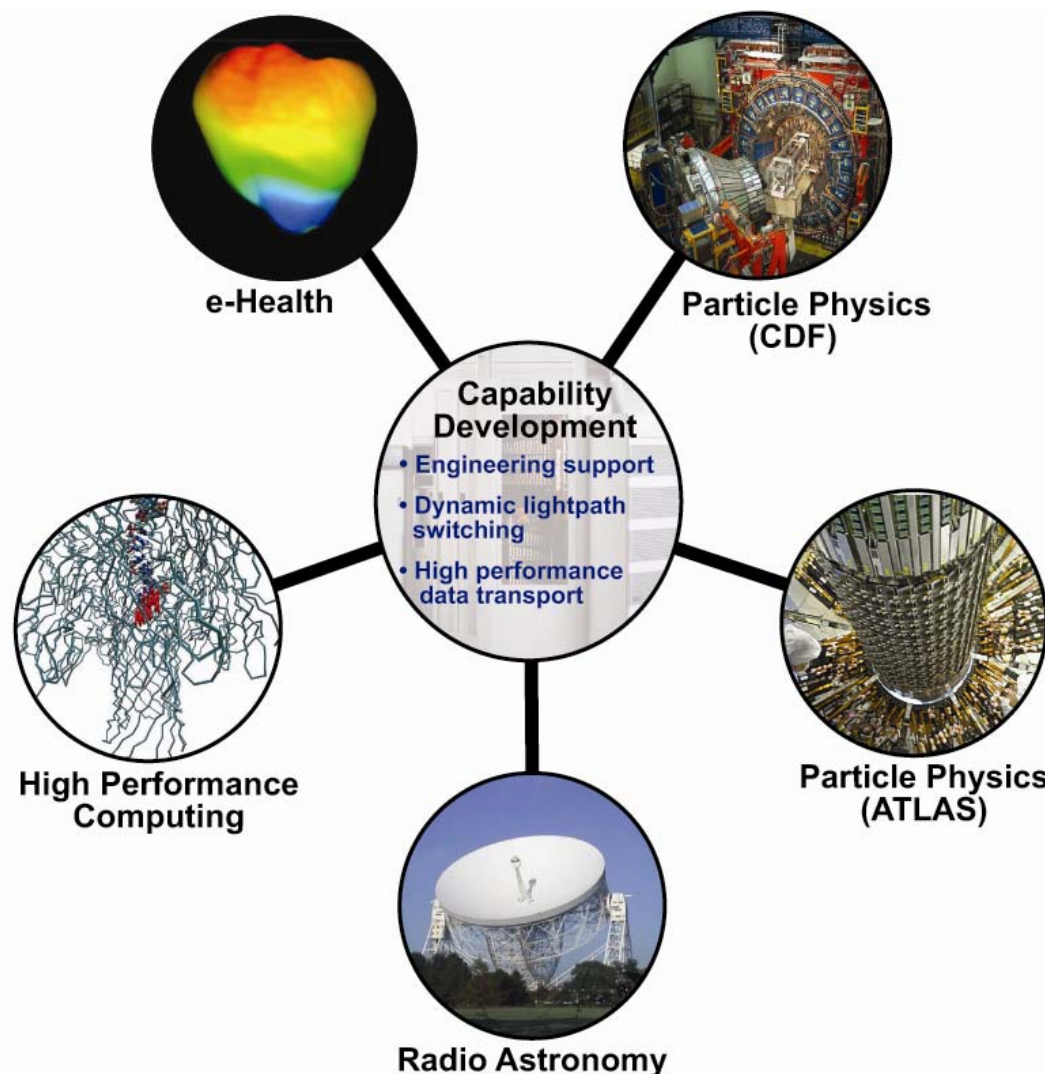

**2. Research projects on UKLight**

**3. The Questions**

# UKLIGHT 'network' projects

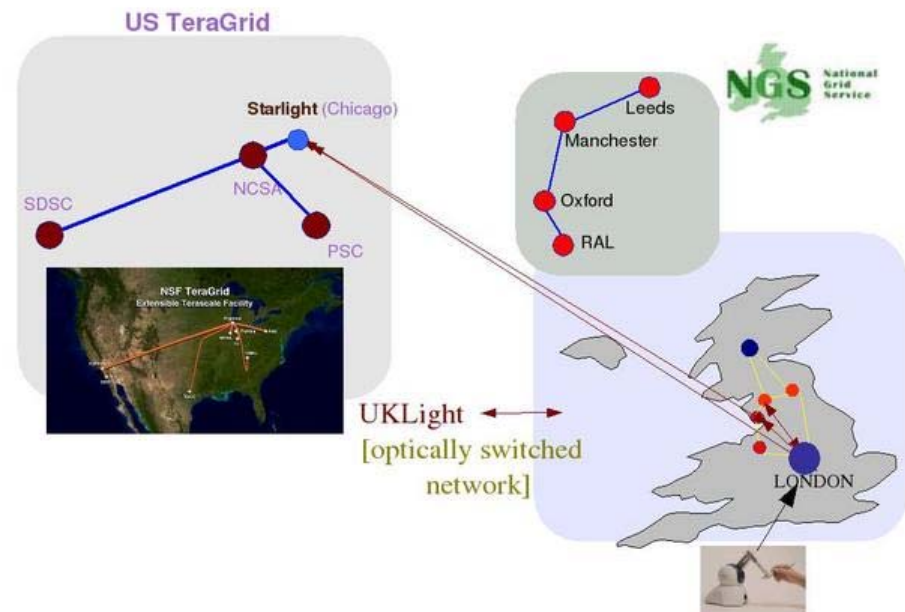

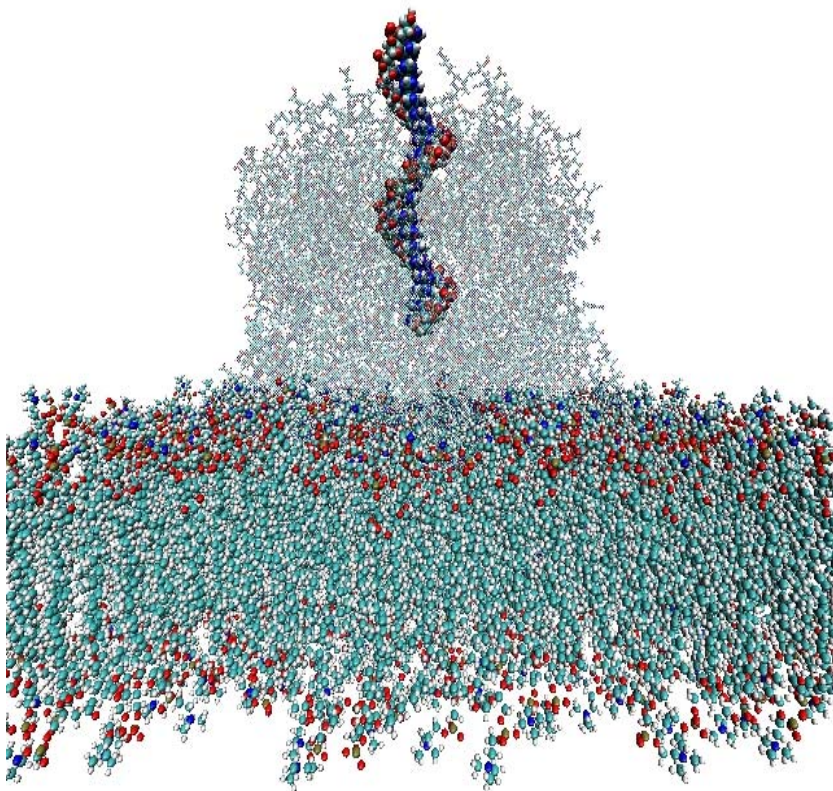

**ESLEA is the first  
widely scoped  
project to exploit  
UKLight for a  
range of scientific  
applications.**

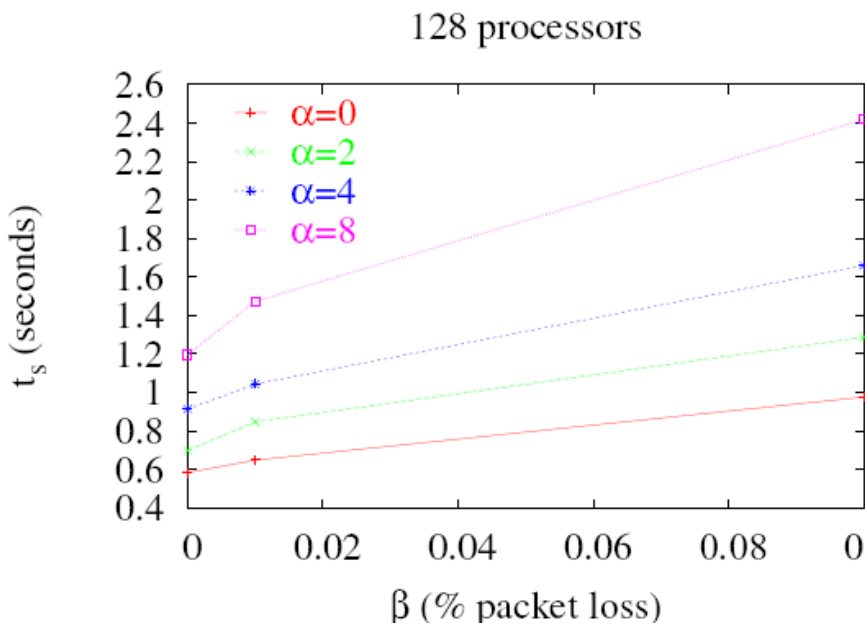

# The SPICE Project:

Thanks to Shantenu Jha & Matt Harvey  
P.Coveney et al.

mov

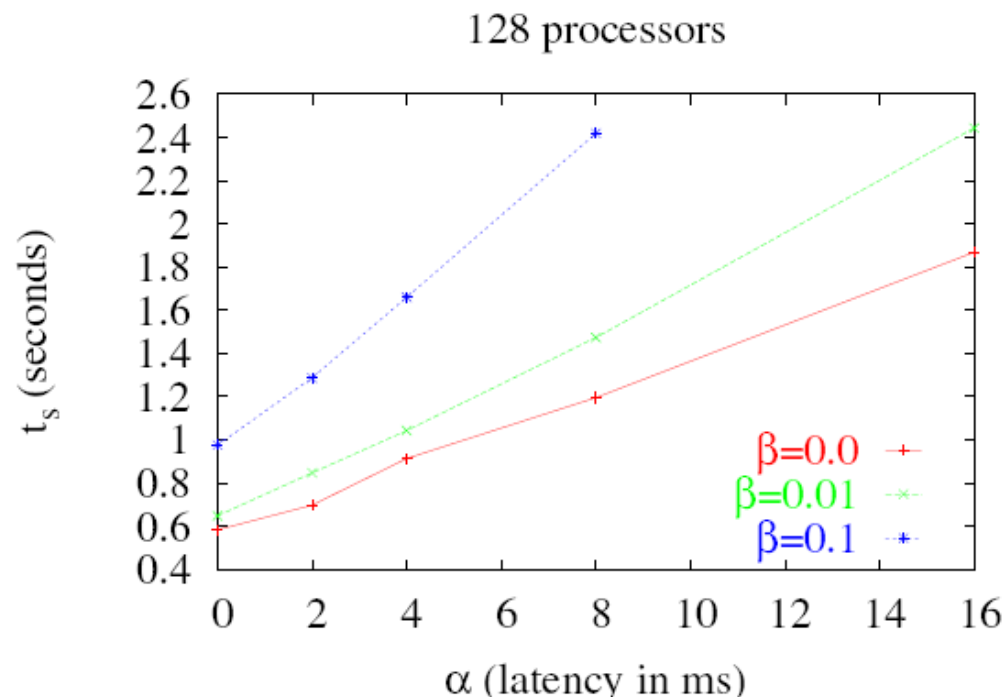

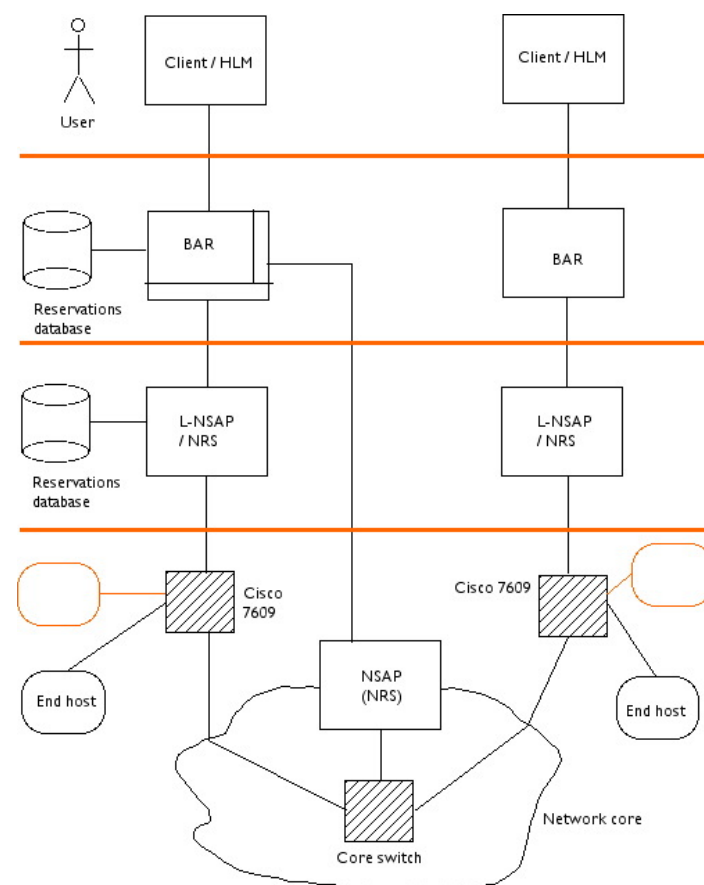

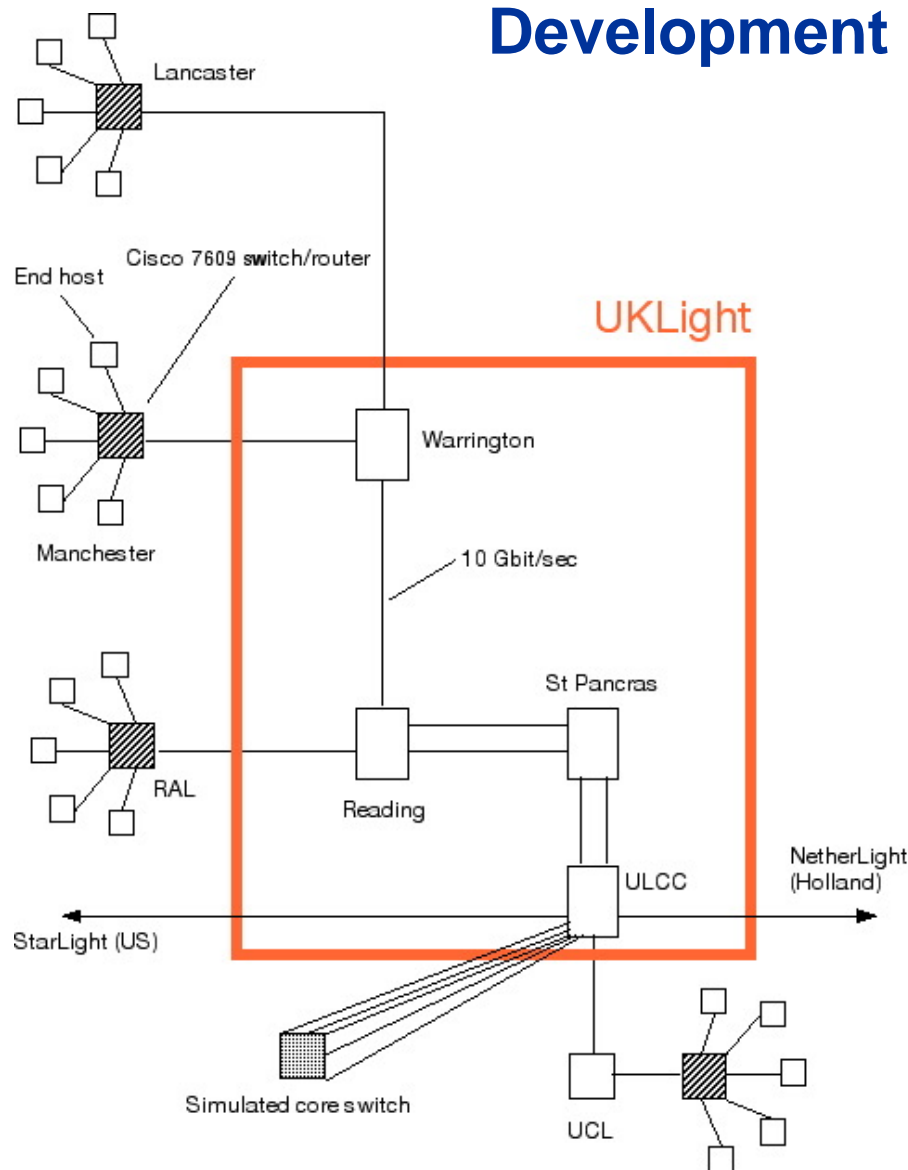

Preliminary results

Thanks to:  
Shanetnu Jha, Matt Harvey

## Development of pilot switched service

# New (just approved) :Dark Fibre Testbed

- Connects Essex  $\Leftrightarrow$  Cambridge  $\Leftrightarrow$  University College London
- These are Photonics Research Groups

# Example: Research at ESSEX University

## TRIUMPH

Develop switching node for:

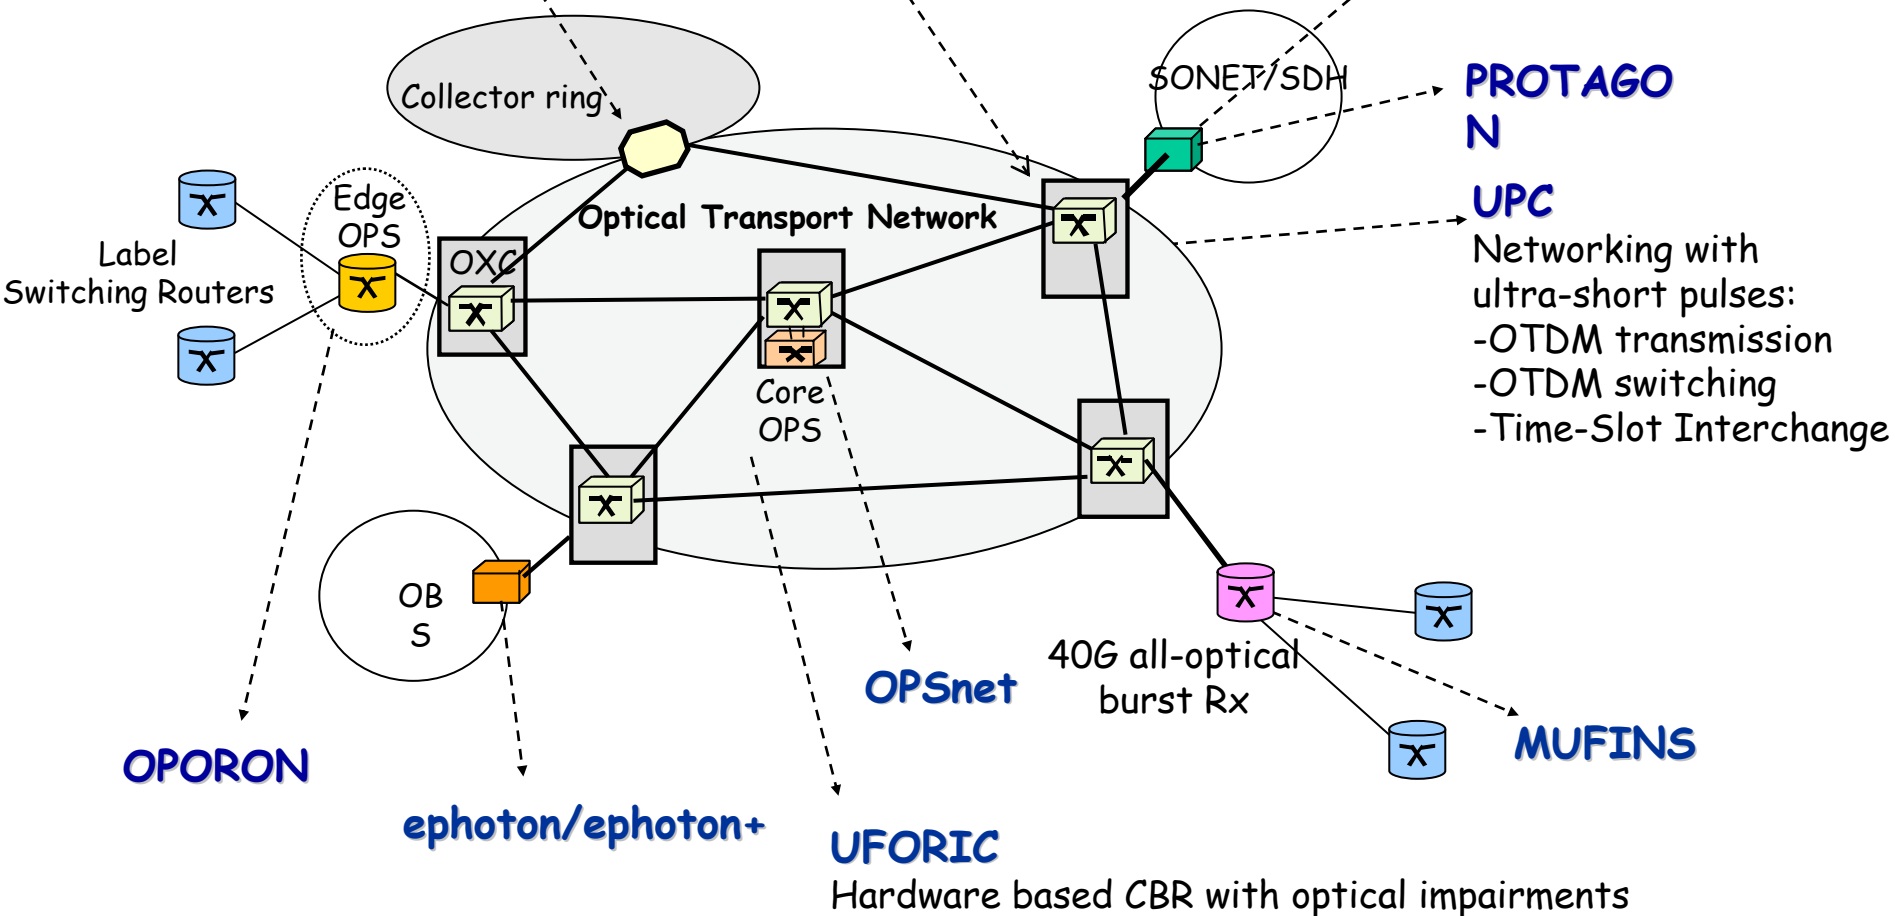

- Bit-rate adaptation
- Multiwavelength regen

## LUCIFER

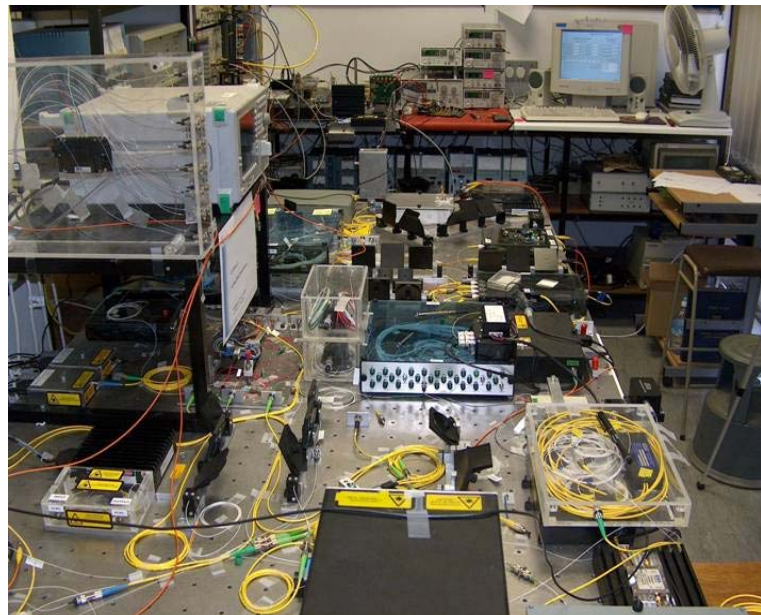

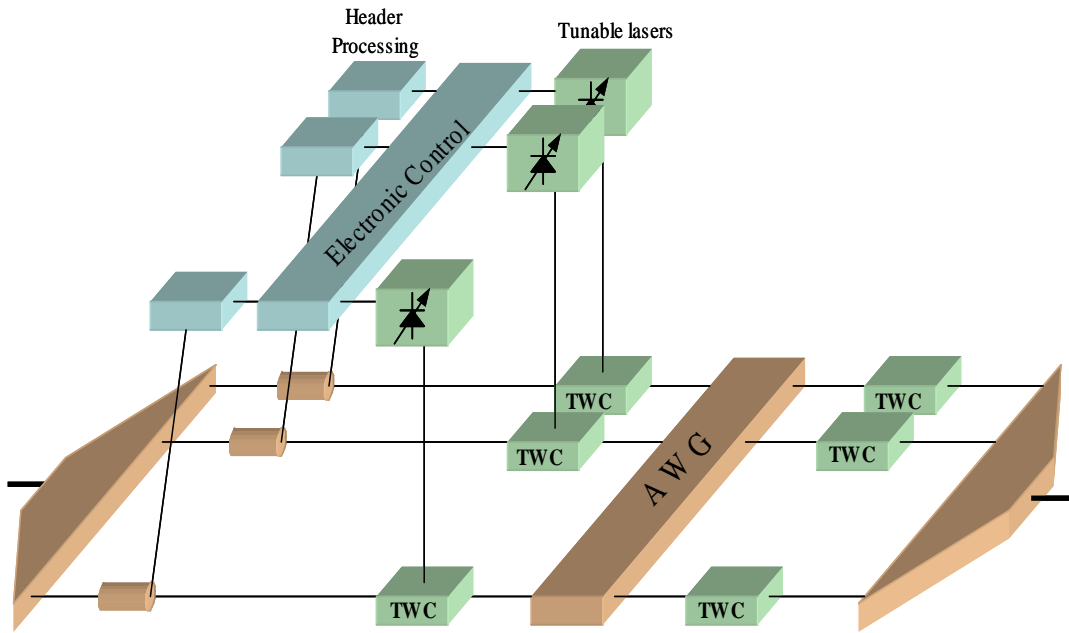

Control plane and network resource provisioning for Grid and eScience

## HIPNET

Modelling end to end QoS across heterogeneous nets

# Packet/Burst Switching Nodes (Optical Packet/Burst Router)

- A wavelength modular design
- Supports variable length optical packet/burst at 40 Gbps
- Switching is based on wavelength conversion and selection
  - Wavelength Conversion is based on dual pump FWM
  - Routing is based on wavelength selection using AWG
- Control is based on fast electronic processing of the optical header and tuning is achieved with ultra-fast tunable lasers

**1. UKLight**

**2. Research projects on UKLight**

**3. The Questions**

# **1. How will the research contribute to enhancement of larger network environment**

- **It already has – the efforts of last 5 years have shaped the new national network in a fundamental way.**
- **It has provided a pervasive national R&D network available to all**

## **1. How will the research contribute to enhancement of larger network environment**

- **It already has – the efforts of last 5 years have shaped the new national network in a fundamental way.**
- **It has provided a pervasive national R&D network available to all**

## **2. How the research will contribute to the goal of international communications exchange**

- **RAL ⇔ CERN, Lancaster ⇔ NIKHEF, London ⇔ Fermilab**
- **Jodrell Bank ⇔ Dwingeloo & Haystack**
- **UK HPCx & CSRA HPC facility ⇔ Teragrid**

## **1. How will the research contribute to enhancement of larger network environment**
